FreeBSD is a registered trademark of the FreeBSD Foundation.
IBM, AIX, EtherJet, Netfinity, OS/2, PowerPC, PS/2, S/390, and ThinkPad are trademarks of International Business Machines Corporation in the United States, other countries, or both.
IEEE, POSIX, and 802 are registered trademarks of Institute of Electrical and Electronics Engineers, Inc. in the United States.
Intel, Celeron, EtherExpress, i386, i486, Itanium, Pentium, and Xeon are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.
Sparc, Sparc64, SPARCEngine, and UltraSPARC are trademarks of SPARC International, Inc in the United States and other countries. Products bearing SPARC trademarks are based upon architecture developed by Sun Microsystems, Inc.
Many of the designations used by manufacturers and sellers to distinguish their products are claimed as trademarks. Where those designations appear in this document, and the FreeBSD Project was aware of the trademark claim, the designations have been followed by the “™” or the “®” symbol.

The release notes for FreeBSD 6.4-STABLE contain a summary of the changes made to the FreeBSD base system on the 6-STABLE development line. This document lists applicable security advisories that were issued since the last release, as well as significant changes to the FreeBSD kernel and userland. Some brief remarks on upgrading are also presented.

Table of Contents

1 Introduction	2
2 What’s New	2
2.1 Security Advisories	2
2.2 Kernel Changes	2
2.2.1 Boot Loader Changes	2

2.3 Userland Changes.....	3
2.3.1 /etc/rc.d Scripts.....	3
2.4 Contributed Software	3
2.5 Ports/Packages Collection Infrastructure	3
2.6 Release Engineering and Integration.....	3
2.7 Documentation	3
3 Upgrading from previous releases of FreeBSD	3

1 Introduction

This document contains the release notes for FreeBSD 6.4-STABLE on the UltraSPARC hardware platform. It describes recently added, changed, or deleted features of FreeBSD. It also provides some notes on upgrading from previous versions of FreeBSD.

The snapshot distribution to which these release notes apply represents the latest point along the 6-STABLE development branch since 6-STABLE was created. Information regarding pre-built, binary snapshot distributions along this branch can be found at <http://www.FreeBSD.org/snapshots/>.

All users are encouraged to consult the release errata before installing FreeBSD. The errata document is updated with “late-breaking” information discovered late in the release cycle or after the release. Typically, it contains information on known bugs, security advisories, and corrections to documentation. An up-to-date copy of the errata for FreeBSD 6.4-STABLE can be found on the FreeBSD Web site.

2 What’s New

This section describes the most user-visible new or changed features in FreeBSD since 6.3-RELEASE.

Typical release note items document recent security advisories issued after 6.3-RELEASE, new drivers or hardware support, new commands or options, major bug fixes, or contributed software upgrades. They may also list changes to major ports/packages or release engineering practices. Clearly the release notes cannot list every single change made to FreeBSD between releases; this document focuses primarily on security advisories, user-visible changes, and major architectural improvements.

2.1 Security Advisories

An error that could allow sendfile(2) to inappropriately access the contents of a file has been fixed. For more information, see security advisory FreeBSD-SA-08:03.sendfile¹.

2.2 Kernel Changes

2.2.1 Boot Loader Changes

1. <http://security.FreeBSD.org/advisories/FreeBSD-SA-08:03.sendfile.asc>

2.2.2 Hardware Support

2.2.2.1 Multimedia Support

2.2.2.2 Network Interface Support

2.2.3 Network Protocols

2.2.4 Disks and Storage

2.2.5 File Systems

2.3 Userland Changes

2.3.1 */etc/rc.d* Scripts

2.4 Contributed Software

2.5 Ports/Packages Collection Infrastructure

2.6 Release Engineering and Integration

2.7 Documentation

3 Upgrading from previous releases of FreeBSD

Source upgrades to FreeBSD 6.4-STABLE are only supported from FreeBSD 5.3-RELEASE or later. Users of older systems wanting to upgrade 6.4-STABLE will need to update to FreeBSD 5.3 or newer first, then to FreeBSD 6.4-STABLE.

Important: Upgrading FreeBSD should, of course, only be attempted after backing up *all* data and configuration files.
