Identifier	Published	Aff. Versions	Base Score	Exploitability	Impact
> NVD CVE-2007-2079	Apr 18, 2007	1	9.3	8.6	10
▼ NVD CVE-2015-3144	Jun 1, 2016	1	9	8	10
Description The fix_hostname function in cURL and libcurl 7.37.0 through 7.41.0 does not properly calculate an index, which allows remote attackers to cause a denial of service (out-of-bounds read or write and crash) or possibly have other unspecified impact via a zero-length host name, as demonstrated by "http://:80" and ":80." View full record Base Score Metrics AV NETWORK AC LOW AU SINGLE A COMPLETE C COMPLETE I COMPLETE Published on Updated on Jun 1, 2016 Dec 21, 2016
